```
                    Main

      Player              Controller

                     Boneyard        Table

                      Domino
```

A significant amount of logic is done in the Controller, Player (since it is used by computer to determine best combos) and the Table. There is also some logic done iin Main, but I am not sure if it is enouigh to consider it as an Active Object.
